

Region Graz - Pilot Action

DARWIN BIOMEDICAL - Smart Rolling Walker "SPROUT"

Mobility in old age is one of the main issues for seniors to remain their independence

- Seniors describe mobility as
 - *"the greatest possible independence in everyday life"*
 - *"a feeling of freedom"*
 - *"coping with everyday life"*
 - *"memories of good old times"*

To fulfill this wish of seniors to stay mobile even with impairments we work together with the team of DARWIN BIOMEDICAL in further developing their prototype of the smart rolling walker "SPROUT".

The smart rolling walker focusses on

- *Preventing falls and giving*
- *active assistance to their users.*

During the pilot action we focus on the phases of understanding the users needs, conceptualizing those needs together with seniors and experts and testing the prototype with users.

You want to know about methods we use to integrate users feedback and listen to „out of the box“

Start-ups? Join our session on 13th of July from 09:00 - 09:35 with DARWIN BIOMEDICAL
